## Code: 7G522

Max. Marks: 70

I B.Tech. II Semester Supplementary Examinations April 2023

# **Engineering Mechanics - Dynamics**

(Common to CE and ME)

Time: 3 Hours

Answer any five full questions by choosing one question from each unit (5x14 = 70 Marks)

# UNIT–I

- 1. a) A particle moves along a straight line so that its displacement in metre from a fixed point is given by,  $s = t^3 + 3t^2 + 4t + 5$ . Find :
  - (i) Velocity at start and after 4 seconds (ii) Acceleration at start and after 4 seconds.
  - b) A stone dropped into a well is heard to strike the water after 4 seconds. Find the depth of the well, if the velocity of sound is 350 m/sec.

# OR

2. Motion of a particle is given by the equation  $x=t^3-3t^2-9t + 12$ . Determine the time, position and acceleration of the particle when its velocity becomes zero.

# UNIT–II

3. A ceiling fan when switched on attains a maximum angular speed of 1240rpm in 10secomds. Determine (i) the constant angular acceleration and (ii) the number of revolutions made in 10secomds. The regulator of fan is then rotated so that its speed is reduced from 240 rpm to 18 rpm in 5 seconds. Determine the uniform retardation.

## OR

4. Two points A and B located 10 cm apart on a rotating disc have velocities respectively 10 m/s and 15 m/s. Determine (i) the angular velocity of the disc, and (ii) the radial distances of points A & B.

# UNIT-III

- 5. a) Explain D' Alembert's principle.
  - b) A block of 100 N weight is resting on a rough horizontal table. What force p inclined at 30<sup>o</sup> to the horizontal is required to move the block horizontally with an acceleration of 2m/s<sup>2</sup>? The coefficient of kinetic friction between the contact surfaces is 0.2.

## OR

6. Two weights 80 N and 20 N are connected by a thread and move along a rough horizontal plane under the action of force 40 N, applied to the first weight of 80 N as shown below. The co-efficient of friction between the sliding surfaces of the weights and the plane is 0.3. Determine the acceleration of the weights and the tension in the thread using D' Alembert's principle.

# UNIT–IV

7. A jet of water impinges on a symmetrically curved vane at its center. The velocity of the jet is 60 m/s and the diameter 120 mm. The jet is deflected through an angle of 120°. Calculate the force on the vane if the vane is fixed. Also determine the force if the vane moves with a velocity of 25 m/s in the direction of the jet.

## OR

8. A football of mass 200 gm is at rest. A player kicks the ball which moves with a velocity of 20 m/s at an angle of 30° with respect to ground level. Find the force exerted by the player on the ball if duration of strike is 0.02 seconds.

# UNIT–V

9. A right circular cylinder of weight 100 N and radius 20 cm is suspended from a cord that is wound around its circumference. If the cylinder is allowed to fall freely, find the acceleration of its mass center and the tension in the cord.

## OR

10. A string is wound several times around a solid cylinder of 2 kg mass. The free end of the string is fixed to the ceiling and the cylinder is released from rest. Determine its velocity after it has fallen through a height of 2 m. also, determine the tension in string,

			Marks
1	a)	<b>UNIT-I</b> What is a pointer? What are the features of pointers? Write a C program to print	
••	u)	address of a variable	7M
	b)	Write a C program to swap two numbers using pointers.	7M
		OR	
2.	a)	Using pointers write a C program which finds the maximum among the list of	
		elements.	7M
	b)	Explain in detail about Dynamic Memory allocation with examples	7M
3.	2)	<b>UNIT–II</b> Define union. List out the differences between unions and structures	7M
3.	a) b)	Explain different modes to open a file	7M
	0)	OR	
4.	a)	Describe the uses and limitations of getc and putc.	7M
	b)	Write a program for sorting given numbers using selection sort technique	7M
		UNIT–III	
5.		Write a 'C' program for implementation of various operations on queue.	14M
_		OR	
6.		What is a stack? How it can be represented in "C" using arrays?	14M
7.		<b>UNIT-IV</b> Represent a doubly linked list using an array. Write routines to insert and	
		delete elements for this representation.	14M
		OR	
8.		List the operations that can be performed on single linked list. In how many ways	
		a node can be deleted from single linked list? Explain.	14M
9.	a)	<b>UNIT-V</b> Define and describe the terms: Tree, Binary Tree, Complete Binary Tree and	
9.	a)	Degree of a tree.	8M
	b)	Define the following terms of graphs. i) Undirected graph ii) In degree iii) Digraph	6M
		OR	
0.	a)	Explain the operations on Binary Tree.	7M
	b)	Define graph. Explain About the basic Terminology of graphs.	7M

		vertical section plane, whose HT bisects the top view of the axis and makes		
		an angle of $30^{\circ}$ with the reference line cuts the pyramid, removing its top	4 4 5 4	004
		part. Draw the top view, sectional front view, true shape of the section. OR	14M	CO1
2.		A cube of 35mm long edges is resting on the HP on one of its faces with a		
2.		vertical face inclined at 30° to VP. It is cut by a section plane parallel to VP		
		and 9mm away from the axis and further away from the VP. Draw its		
		sectional front view and the top view.	14M	CO1
с С		UNIT-II		
3.		A cylinder of base diameter 50mm and axis length 70mm is resting on HP on its base. A cylindrical hole of 40mm diameter is drilled on the surface of		
		the cylinder. The axis of the hole intersects with the axis of the cylinder at		
		right angles and bisects it. Draw the development of the lateral surface of		
		the cylinder.	14M	CO2
Л	a)	<b>OR</b> Draw the development of lateral surface of a cone of base diameter 48mm		
4.	a)	and altitude 50mm.	7M	CO2
	b)	A Cylinder of 50 mm diameter and axis 75mm is resting on its base on HP.		
		Draw the development of lateral surface of the cylinder.	7M	CO2
		UNIT–III		
5.		A vertical cone diameter of base 80mm and axis 100mm long is completely		
		penetrated by a cylinder of 40mm diameter. The axis of the cylinder is parallel to HP and the VP and intersects the axis of the cone at a point		
		30mm above the base. Draw the projections of the solids showing curves of		
		intersection.	14M	CO3
_		OR		
6.		A vertical square prism, base 50mm side and axis 90mm is completely penetrated by a horizontal square prism, base 35mm side and axis 90mm,		
		so that their axes bisect. The axis of the horizontal prism is parallel to the		
		V.P., while the faces of the two prisms are equally inclined to the V.P. Draw		
		the projections of the solids showing lines of intersection.	14M	CO3
-				
7.		Draw the isometric view of a square with the side of the base 40mm and length of axis 70mm, when its axis is vertical and horizontal.	1/1	CO4
		OR	1 - 1 1 1	004

8. A hexagonal pyramid with side of base 30mm and axis 120mm long is resting on its base on HP. An edge of the base is parallel to VP. A horizontal section plane passing through a point to n the axis at a distance of 60mm from the base. Draw the isometric view of the frustum of the pyramid.

UNIT-V

14M CO4 L4

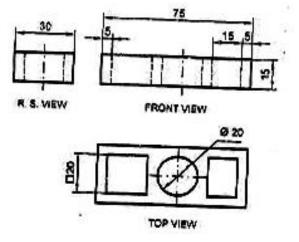

9. Draw the isometric view of the following figure

14M CO5 L4

10. Draw the isometric view of the following figure
