6. Two bodies of mass 100 kg and 40 kg are connected by a thread and move along a horizontal plane under the action of a force 450 N applied to the first body of mass 100 kg as shown in figure. The coefficient of friction between the sliding surfaces of bodies and the plane is 0.3. Determine the acceleration of the two bodies and the tension in the thread using D-Alembert's principle.

UNIT-IV

7. A block weighing 100 N is moving along a horizontal rough surface of friction coefficient 0.2 with a velocity of 5 m/s. A push of 80 N inclined at 30° to the horizontal acts on the block. Using work – energy principle, find the velocity of the block after it had moved through a distance of 20 m.
