## Code: 5G634

II B.Tech. I Semester Regular \& Supplementary Examinations Nov/Dec 2017

## Building Materials and Construction

( Civil Engineering )
Max. Marks: 70
Time: 3 Hours
Answer all five units by choosing one question from each unit ( $5 \times 14=70$ Marks )
$* * * * * * * * *$

## UNIT-I

1. a) What are the tests to which a stone should be subjected before it is selected for building purposes?
b) When is it required to quarry stones by blasting? How do you quantify the requirement of explosives in blasting rocks?

## OR

2. a) Explain Physical, Chemical and Mineralogical analysis of soil for manufacturing bricks? Write different steps of manufacturing of bricks.
b) Write different types of kiln for burning of bricks and explain the working of continuous kiln with diagram.

## UNIT-II

3. a) What are the characteristics of good tiles? Write type of tiles.
b) Explain the classification of limes. Compare fat lime and hydraulic lime.

## OR

4. a) What is cement? Write different types of cement and methods of manufacturing of cement.
b) Write different uses of aluminium, glass and bituminous materials in building.

## UNIT-III

5. a) What is timber and it's seasoning? Explain different methods of seasoning with advantages and disadvantages.

b) Classify tree and write advantages of wood. Describe various parts of exogenous tree
at any cross-section.

## OR

6. a) What is man-made wood? Write its classification, advantages, process of manufacturing and uses in building construction.

b) What is the function of preservatives used for preservation of timber? Explain the
types of preservatives used for timber in details.

## UNIT-IV

7. a) Explain types of masonry. Describe classification of rubble masonry in details.
b) What is meant by foundation? Explain different types of shallow foundation and their
uses in details.

## OR

8. a) Differentiate between English bond and Flemish bond.
b) Describe purposes of cavity wall and partition wall. Differentiate among isolated footing, combined footing and raft foundation with uses.

## UNIT-V

9. a) Explain different types of Lintels, Arches and Stair cases and their purposes.
b) Discus different types of floors and roofs with uses. ..... 7M

## OR

10. a) Write the objectives of plastering and pointing. Explain different types of pointing.
b) Describe centering, shuttering and scaffolding.
$\square$

## Code: 5G538

## R-15

## II B.Tech. I Semester Regular \& Supplementary Examinations Nov/Dec 2017 Electrical \& Mechanical Technology <br> ( Civil Engineering ) <br> Max. Marks: 70 <br> Time: 3 Hours <br> Answer all five units by choosing one question from each unit ( $5 \times 14=70$ Marks ) <br> Use separate booklets for Part-A \& Part-B

## PART-A

## UNIT-I

1. a) i. State ohm's law. What are the limitations of ohm's law?
ii. Explain inductance parameter in detail.
b) i. State KVL \& KCL.
ii. A 10 resistor is connected across 50 V battery.

Calculate:
(A) Current through resistor.
(B) Power consumed by resistor.
(C) Energy with time 10 seconds.

## OR

2. a) Explain the types of DC generators with neat diagrams. 8 M
b) Explain the principle of operation of DC generator. 6 M

## UNIT-II

3. a) Explain the principle of operation of single phase transformer. 7M
b) A $4 \mathrm{kVA}, 200 / 400 \mathrm{~V}, 50 \mathrm{~Hz}, 1-\Phi$ transformer has equivalent resistance referred to primary as 0.15 . Calculate
i. Total copper loss on full load.
ii. Efficiency while supplying full load at 0.9 p.f lagging.
iii. Efficiency while supplying half load at 0.8 p.f lagging.

Assume iron losses equal to 60 W .

## OR

4. a) Explain the torque-slip characteristics of three phase induction motor. 7M
b) Derive the expression for e.m.f. of 3-Ф alternator. 7M

## PART-B

## UNIT-III

5. a) What is welding? Classify the welding processes?
b) Exemplify the formation of various types of flames in oxy acetylene welding
process with neat sketches.

## OR

6. a) Describe the working principle of arc welding and explain the importance of polarity in arc welding.
b) Describe the working of TIG with its specific applications.

## UNIT-IV

7. a) Compare four stroke and two stroke cycle engines. Bring out clearly their relative merits and demerits.
b) Explain the working of a two stroke petrol engine with neat sketch.

## OR

8. a) What are the characteristics of a good fuel supply system? Explain fuel supply system in petrol engine.
b) What are the advantages of a multi-stage compression over single stage? List the applications of a compressed air.

## UNIT-V

9. a) Define refrigerant. What are the desirable properties of an ideal refrigerant?
b) Compare vapour compression refrigeration system with a vapour absorption refrigeration system.

## OR

10. a) Define air-conditioning. Explain room air-conditioning system with a neat
sketch.
b) Explain the following terms briefly :
i. Refrigerating effect
ii. Wet bulb temperature
iii. Dew point temperature
iv. Psychrometry
v. Comfort Air conditioning
vi. Relative humidity
vii. coefficient of performance

Hall Ticket Number :

II B.Tech. I Semester Regular \& Supplementary Examinations Nov/Dec 2017

## Engineering Mathematics-III

( Common to CE \& ME )
Max. Marks: 70
Time: 3 Hours
Answer all five units by choosing one question from each unit ( $5 \times 14=70$ Marks )

## UNIT-I

1. a) Find the rank of the matrix by reducing it to the normal form $\left[\begin{array}{rrrr}4 & 3 & 2 & 1 \\ 5 & 1 & -1 & 2 \\ 0 & 1 & 2 & 3 \\ 1 & -1 & 3 & -2\end{array}\right]$
b) Find the values of ' $a$ ' and ' $b$ ' for which the equations
$x+y+z=3 ; x+2 y+2 z=6 ; \quad x+a y+3 z=b$
have (i) No Solution (ii) a Unique Solution (iii) Infinite number of Solutions.

## OR

2. Find a Matrix P which transforms the matrix $A=\left[\begin{array}{ccc}1 & 0 & -1 \\ 1 & 2 & 1 \\ 2 & 2 & 3\end{array}\right]$ to Diagonal form. Hence Calculate $A^{4}$. Find the Eigen Values and Eigen Vectors of $A$.

## UNIT-II

3. a) Derive a formula to find the cube root of N using Newton- Raphson Method hence find the cube root of 15 .
b) Find the parabola passing through points $(0,1)(1,3)$ Raphson Moth $n g$ Lagrange's interpolation formula.

## OR

4. Evaluate $\int_{0}^{1} \sqrt{1+x^{3}} d x$ taking $\mathrm{h}=0.1$ using
i) Simpson's $1 / 3^{\text {rd }}$ rule (ii) Simpson's $3 / 8^{\text {th }}$ rule (iii) Trapezoidal rule.

## UNIT-III

 $y(0)=2, z(0)=1$ by using Taylor's series method.

## OR

6. Apply the fourth order Runge-Kutta method, to find an approximate values of $y$ when $\mathrm{x}=1.2$, in steps of 0.1 , given that $y^{\prime}=x^{2}+y^{2}, \mathrm{y}(1)=1.5$

## UNIT-IV

7. Find the Fourier series to represent the function $f(x)=x \sin x,-\pi<x<\pi$.

Hence deduce that $\frac{1}{1.3}-\frac{1}{3.5}+\frac{1}{5.7}-\frac{1}{7.9}+\ldots \ldots .=\frac{1}{4}(\pi-2)$

## OR

8. a) Form the Partial differential equation by eliminating the arbitrary function from $\phi\left[\frac{y}{x}, x^{2}+y^{2}+z^{2}\right]=0$
b) Solve by the method of separation of variables $2 x z_{x}-3 y z_{y}=0$.

## UNIT-V

9. a) If $f(z)$ is a regular function of $z$, prove that

$$
\left[\frac{\partial^{2}}{\partial x^{2}}+\frac{\partial^{2}}{\partial y^{2}}\right]|f(z)|^{2}=4\left|f^{\prime}(z)\right|^{2}
$$

b) Find k such that $f(x, y)=x^{3}+3 k x y^{2}$ may be harmonic and find its conjugate.

## OR

10. Using Cauchy's integral formula, evaluate $\int_{C} \frac{z^{4}}{(z+1)(z-i)^{2}} d z$ where C is the ellipse $9 x^{2}+4 y^{2}=36$.

## Code: 5G633

## II B.Tech. I Semester Regular \& Supplementary Examinations Nov/Dec 2017

# Fluid Mechanics 

( Civil Engineering)
Answer all five units by choosing one question from each unit ( $5 \times 14=70$ Marks )

## UNIT-I

1. a) What is Rheology? Explain about Rheological diagram.
b) A mass of liquid weighs 500 N , corresponding to $g=9.81 \mathrm{~m} / \mathrm{s}^{2}$. Find
(i) its mass and (ii) its weight in a planet with the acceleration due to gravity $3.2 \mathrm{~m} / \mathrm{s}^{2}$ and $20 \mathrm{~m} / \mathrm{s}^{2}$.

## OR

2. a) State and prove the Pascal's law and give some examples where this principle is applied.
b) The pressure intensity at a point in a fluid is given as $49 \mathrm{kN} / \mathrm{m}^{2}$. Find the corresponding height of the fluid when it is (i) water and (ii) an oil of specific gravity 0.8 .

## UNIT-II

3. a) Define the following and give one particle example for each of the following. (i) Laminar flow (ii) Turbulent flow (iii) Steady flow and (iv) Uniform flow.

 satisfy the continuity equation.

## OR

4. a) Explain some practical applications of Bernoulli's theorem.
b) In a smooth pipe of uniform diameter 25 cm , pressure of 50 kPa was observed at section 1, which was at elevation 10.0m. At another section 2 at elevation 12.0 m the pressure was 20 kPa and the velocity was $1.25 \mathrm{~m} / \mathrm{s}$. Determine the total head, if the pipe is 7 m above the datum line.

## UNIT-III

5. a) Explain about Moody's chart with help of neat sketch.
b) Draw the Total Energy Line (TEL) and Hydraulic Gradient Line (HGL) between the water surfaces in the two tanks which are connected by a horizontal pipe of diameter 0.35 m and length 450 m . The rate of flow of water through the pipe is
$290 \mathrm{lit} / \mathrm{sec}$. Consider all losses and take the value of $f=0.018$.

## OR

6. a) Sketch a Pitot tube and explain how it is used to measure the velocity of a flowing fluid?
b) A venturi meter has its axis vertical, the inlet and throat diameters being 145 mm and 65 mm respectively. The throat is 220 mm above inlet and $C_{d}=0.97$. Petrol of Specific gravity 0.78 flows up through the meter at a rate of $0.029 \mathrm{~m}^{3} / \mathrm{s}$. Find the pressure difference between the inlet and the throat.

7M
UNIT-IV
7. a) Show that the ratio of maximum velocity to average velocity is 2.0 in the case of laminar flow through pipe. ..... 7M
b) Heavy fuel oil flows from $M$ to $N$ through a 100 m horizontal steel pipe of 150 mm diameter. The pressure at $M$ is 1.08 MPa and at $N$ is 0.95 MPa . The kinematic viscosity is $412.5 \times 10^{-6} \mathrm{~m}^{2} / \mathrm{s}$ and relative density of the oil is 0.918 . What is the flow rate in $\mathrm{m}^{3} / \mathrm{s}$. ..... 7M

## OR

8. a) How would you distinguish between hydro-dynamically smooth and rough boundaries? ..... 4M
b) Show that the discharge per unit width between two parallel plates distance $h$ apart, when one plate is moving at velocity $U$ while the other one is held stationary, for the condition of zero shear stress at the fixed plate is $q=h U / 3$. ..... 10M
UNIT-V
9. a) Define the terms dimensional analysis and model analysis ..... 6M
b) Explain the terms distorted models and undistorted models. What is the use of distorted models? ..... 8M
OR
10. a) What do you understand by the term dimensionally homogeneous equation? ..... 4M
b) The variables controlling the motion of a floating body through water are the drag force $F$, the speed $V$, the length $L$, the density $\rho$, dynamic viscosity of water $\mu$ and acceleration due to gravity $g$. Derive an expression for $F$ by Rayleigh's method of dimensional analysis. ..... 10M

## Code: 5G631

R-15
II B.Tech. I Semester Regular \& Supplementary Examinations Nov/Dec 2017

## Strength of Materials-I

( Civil Engineering )
Max. Marks: 70
Time: 3 Hours
Answer all five units by choosing one question from each unit ( $5 \times 14=70$ Marks )
*********

## UNIT-I

1. a) Define the following
i. Yield point
ii. Proportional limit
iii. Elasticity
iv. Plasticity
v. Ultimate Strength
vi.Strain hardening
b) A steel cube is subjected to a hydrostatic pressure of $1.5 \mathrm{MPa}^{\text {". }} \mathrm{Be}$ cause of this pressure the volume decreases to give a dilatation of $-10-5$. The Young's modulus of the material is 200 GPa . Determine Poisson's ratio of the material and also the bulk modulus.

## OR

2. A copper rod, 12 mm dia and 400 mm long, fits into an aluminium tube of external diameter 20 mm and thickness 4 mm of equal length. If the assembly is held together by a rigid plate at the end and is stress-free at $20^{\circ} \mathrm{C}$, find the stresses in the two materials when it is heated to $60^{\circ} \mathrm{C}$. For copper, $E=120$ GPa and $\alpha=18 \times 10^{-6} / \mathrm{O}^{\mathrm{C}}$. For aluminium, $E=70 \mathrm{GPa}$ and $\alpha=23 \times 10^{-6 / 0} \mathrm{C}$.

## UNIT-II

3 Sketch the B.M. and S.F. diagrams for the beam shown and state (a) the position and magnitude of the maximum bending moment, (b) the position of the point of contra-flexure.

4 a) Establish a relation between intensity of loading, w shear force $\mathbf{F}$ and bending moment $\mathbf{M}$ at section in a beam.
b) Define point of contra-flexure with a diagram and state its significance in beams.

## UNIT-III

OR
6. Consider the cantilever beam subject to the concentrated load shown in Fig. Determine the maximum shearing stress due to $\boldsymbol{F}$ in the beam and also determine the shearing stress 25 mm from the top surface of the beam at a section adjacent to the supporting wall.

## UNIT-IV

7. Determine the deflection curve of a cantilever beam subject to the uniformly Distributed load w, shown in Fig.

OR
8 A beam of length 6 m is simply supported at its ends and carries two point loads of 48 kN and 40 kN at a distance of 1 m and 3 m respectively from the left support. Find:
(i) deflection under each load,
(ii) maximum deflection, and
(iii) the point at which maximum deflection occurs.

Given $E=2 \times 10^{4} \mathrm{~N} / \mathrm{mm}^{2}$ and $\mathrm{I}=85 \times 10^{6} \mathrm{~mm}^{4}$.

## UNIT-V

9. a) Draw the stress element for a Uni-axial tension test and find out the following from Mohr's circle.
i. Principal stresses
ii. Max shear stress
iii. Principal planes
iv. Max.shear stress plane.
b) Define shear strain energy theory of failure. For which materials it is preferred.

## OR

10. Define maximum shear stress theory of failure. Also draw the envelope of this theory of failure in 2D.
$\square$
Code: 5G632

## R-15

## II B.Tech. I Semester Regular \& Supplementary Examinations Nov/Dec 2017 Surveying

( Civil Engineering )
Max. Marks: 70
Time: 3 Hours
Answer all five units by choosing one question from each unit ( $5 \times 14=70$ Marks )

## UNIT-I

1. a) Briefly explain the plane surveying and geodetic surveying
b) Define true bearing and magnetic bearing. What are the various types of bearing systems?

## OR

2. a) What are the various corrections which are applied on the chain? What is the need of applying these corrections?
b) Define local attraction and how we detect it? Convert the following WCB in QB.
(i) $53^{\circ} 55^{\prime}$
(ii) $270^{\circ} 45^{\prime}$
(iii) $175^{\circ} 34^{\prime}$ (iv) $221^{\circ} 23^{\prime}$

## UNIT-II

3. a) What do you understand by contour lines? What are the characteristics of contour lines?
b) The perpendicular offsets that were taken from a chain at a interval of 30 m .

| Chainage $(\mathrm{m})$ | 0 | 30 | 60 | 90 | 120 | 150 | 180 | 210 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Offset $(\mathrm{m})$ | 0 | 8.76 | 7.89 | 9.43 | 8.44 | 7.54 | 7.35 | 8.75 |

Compute the area between the chain line and irregular boundary by, Trapezoidal rule.

## OR

4. a) The figure given below shows various observations made on station $A, B, C$ and $D$. Enter the values in the level book and determine the RLs of different points by both the methods.

## UNIT-III

5. a) The following bearings were observed for an open traverse.

| Line | FB | BB |
| :---: | :---: | :---: |
| $A B$ | $45^{\circ} 45^{\prime}$ | $226^{\circ} 10^{\prime}$ |
| $B C$ | $96^{\circ} 55^{\prime}$ | $277^{\circ} 5^{\prime}$ |
| CD | $29^{\circ} 45^{\prime}$ | $209^{\circ} 10^{\prime}$ |
| $D E$ | $324^{\circ} 48^{\prime}$ | $144^{\circ} 48^{\prime}$ |

Which stations are affected by local attraction? Find out the corrected bearing of all lines.
b) Discuss briefly, how we calculate the horizontal and vertical angles by a theodolite?

## OR

6. The following bearings were observed for a closed traverse ABCDA using a prismatic compass.

| Line | FB | BB |
| :--- | :--- | :--- |
| $A B$ | $75^{\circ} 30^{\prime}$ | $260^{\circ} 00^{\prime}$ |
| $B C$ | $191^{\circ} 45^{\prime}$ | $11^{\circ} 45^{\prime}$ |
| CD | $289^{\circ} 30^{\prime}$ | $109^{\circ} 45^{\prime}$ |
| DA | $358^{\circ} 00^{\prime}$ | $177^{\circ} 00^{\prime}$ |

Find out the corrected bearing of all lines.

## UNIT-IV

7. a) What is plane table? What are the various types of plane table?
b) The stadia readings with sight horizontal taken on a vertical staff 60 m away from the tacheometer were 1.280 m and 1.785 m . The focal length of the object lens was 30 cm and distance between object lens and vertical axis of tacheometer was 20 cm . find the stadia interval.

## OR

8. a) What are the various instruments used in plane table surveying, describe briefly.
b) In an ordinary stadia telescope, the focal length is 20 cm . the tacheometric constants are $\mathrm{K}=100$ and $\mathrm{c}=0$. An error of 0.0035 cm exists in stadia interval. What will be the numerical error in computed horizontal distance if ' $S$ ' is the staff intercept.

## UNIT-V

9. a) What is the need of providing circular curves to the road? What are the various horizontal curves?
b) What are the various elements of a simple circular curve? Describe briefly.

## OR

10. a) How you will set out the horizontal circular curve by perpendicular offset method from the tangent?
b) What is a total station? What are the various functions of a total station?
