Max. Marks: 70

II B.Tech. I Semester Supplementary Examinations August 2021

Engineering Mathematics-III

(Common to CE & ME)

Time: 3 Hours

R-15

Answer any five full questions by choosing one question from each unit (5x14 = 70 Marks)

1. Find the values of for which the equations

(-1)x+(3+1)y+2z=0; (-1)x+(4-2)y+(+3)z=0; 2x+(3+1)y+3(-1)z=0 are consistent and find the ratios of x:y:z when has the smallest of these values. What happens when has the greatest of these values?

- 2. Find the characteristic of the matrix A= $\begin{bmatrix} 1 & 1 & 3 \\ 1 & 3 & -3 \\ -2 & -4 & -4 \end{bmatrix}$ and hence find its inverse **UNIT-II**
- 3. a) Find a real root of the equation x³-2x-5=0 by the method of false position correct to three decimal places.
 - b) Find the cubic polynomial which takes the following values:

Х	0	1	2	3				
f(x)	1	2	1	10				
OR								

4. Evaluate $\int_{0}^{6} \frac{dx}{1+x^2}$ by using (i) Trapezoidal rule, (ii) Simpson's 1/3 rule (iii) Simpson's 3/8 rule.

UNIT-III

5. Employ Taylor's method to obtain approximate value of y at x=0.2 for the differential equation $dy/dx=2y+3e^x$, y(0)=0.Compare the numerical solution obtained with the exact solution.

6. Using Runge-Kutta method of order 4, find y for x=0.1,0.2,0.3 given that $dy/dx=xy+y^2$, y(0)=1.Continue the solution at x=0.4 using Milne's method.

UNIT–IV

OR

7. Obtain the Fourier series for f(x) = x in the interval -f < x < f

OR

8. Find the half range sine and cosine series of f(x) = x in 0 < x < 2

UNIT-V

OR

9. Determine p such that the function $f(z) = \frac{1}{2}\log(x^2 + y^2) + i\tan^{-1}\left(\frac{px}{y}\right)$ be an analytic function

function

10. Evaluate $\int_{c} \frac{e^{z}}{(z^{2}+f^{2})^{2}} dz$ where c is |z|=4

	,	Answer any five full questions by choosing one question from each unit (5x14 = 70 Marks ********
		UNIT-I
1.	a)	Define alloy. Explain its necessity.
	b)	Discuss about Schottky defect and Frankel defect.
_		OR
2.		Classify bonds and explain them with examples
0		UNIT-II Drow a past skotch of Iron Iron Carbida (Es Es C) diagram and label all important points
3.		Draw a neat sketch of Iron-Iron Carbide (Fe-Fe ₃ C) diagram and label all important points, lines and phases in it.
		OR
4.	a)	Classify Equilibrium diagrams
	b)	Define Liquidus line, Solidus line and Solvus line.
	,	UNIT–III
5.	a)	What do you understand by Season cracking and how it can be prevented
	b)	What is dezincification? How it can be minimized
		OR
6.		Explain the Composition, microstructure, properties and applications of
		(i) White cast iron(ii) Spheroidal Graphite cast Iron
		UNIT-IV
7.	a)	What is Surface treatment? Mention its characteristics
	b)	Briefly explain Sheradising process.
	,	OR
8.		Elaborate the diffusion and mechanical coating process
•		
9.		Explain any two methods of manufacture of composites
		OR Describe the basic steps in powder metallurgy process
10.		DESCHIDE THE DASIC STEPS IN POWART MELANALAY PLOCESS

10. Describe the basic steps in powder metallurgy process

		Answer any five full questions by choosing one question from each unit (5x14 = 70 Mark ********	
		UNIT-I	
1.	a)	Draw the stress-strain diagram of mild steel specimen subjected to tensile test and explain the salient points.	7M
	b)	An aluminium bar 60mm diameter when subjected to an axial tensile load 100KN elongates 0.20mm in a gauge length 300mm and the diameter is decreased by 0.012mm. Calculate the modulus of elasticity and the poisson's ratio of the material. OR	7M
2.	a)	Draw Mohr's circle when the component is subjected to mutually perpendicular tensile stresses	7M
	b)	Prove that the maximum stress induced in a body due to suddenly applied load is twice the stress induced when the same load is applied gradually.	7M
3.		A beam ABC 8 m long has the support at the end A and other support at B 6 m from A. It carries a uniformly distributed load of 6 kN/m over the entire length and a point load of 10kN at the end C. Draw the shear force and bending moment diagrams OR	14M
4.		A simple supported beam of length 8m rests on supports 6m apart, the right hand end is overhanging by 2 m. The beam carries a uniformly distributed load of 1500 N/m over the entire length. Draw the shear force and bending moment diagrams and find the point of contra flexure, if any?	14M
5.	a)	Prove that for a rectangular section the maximum shear stress is 1.5times the average stress. Sketch the variation of shear stress.	7M
	b)	Circular beam of 100mm diameter is subjected to a shear force of 10 KN. Calculate i. Average shear stress. ii. Maximum shear stress.	
		Also sketch the variation of the shear stress along the depth of the beam. OR	7M
6.	a)	Derive the section modules for a hollow rectangular section	4M
	b)	A beam is simply supported and carries a U.D.L of 40kN/m run over the whole span. The section of the beam is rectangular having depth as500mm. If the maximum stress in the material of the beam is $120N/mm^2$ and moment of inertia of the section is $7 \times 10^8 \text{ mm}^4$, find the span of the beam.	10M
		UNIT–IV	
7.	a)	Derive the relationship between slope, deflection and radius of Curvature of a simply supported beam.	7M
	b)	A beam of 6 meter long simply supported at its ends, carries a point load 'W' at its centre. If the slope at the ends of the beam is not to exceed 1°, find the maximum deflection. OR	7M
8.		A beam ABC of length 10 m has one support at the left end and the other support at a distance of 6 m from the left end. The beam carries a point load of 1 kN at right end and also carries a UDL of 3 kN/m over a length of 4 m from right end 'C'. Determine the slope and deflection at point 'C'. Take E= 2 X 10^5 N/mm ² and I = 5 X 10^8 mm ⁴ .	14M
9.		UNIT-V State and explain Lame's theory for thick cylindrical shells. Derive the Lame's equations. OR	14M
10.		A compound cylinder is made by shrinking a cylinder of external diameter cylinder of 30 cm and internal diameter25cm over another cylinder of external diameter 25cm and internal diameter20cm. After shrinking the radial pressure at the common junction was 8 N/mm2. Find the final stresses set up across the section when the compound cylinder is subjected to an internal fluid pressure of 84.5 N/mm ² .	14M
