R-14

Code: 4G573

IV B.Tech. I Semester Supplementary Examinations August 2020

**Finite Element Methods**

( Civil Engineering )

Max. Marks: 70

Time: 3 Hours

Answer all five units by choosing one question from each unit ( 5 x 14 = 70 Marks )

\*\*\*\*\*

**UNIT-I**

1. a) Describe the procedure involved in finite element method? 7M
- b) If the displacement field is described as follows,  

$$u = (-x^2 + 2y^2 + 6xy)10^{-4} \text{ and } v = (3x + 6y - y^2)10^{-4},$$
 Determine the strain components (direct and shear) at the point  $x=1, y=0$ . 7M

**OR**

2. An axial load of  $4 \times 10^5$  N is applied at  $30^\circ$  C to the rod as shown in figure. The temperature is then raised to  $60^\circ$ C. Calculate nodal displacements, stresses in each element and reactions at each node.

	Aluminum	Steel
A	1000 mm <sup>2</sup>	1500 mm <sup>2</sup>
E	$0.7 \times 10^5$ N/mm <sup>2</sup>	$2 \times 10^5$ N/mm <sup>2</sup>
$\alpha$	$23 \times 10^{-6}/^\circ\text{C}$	$12 \times 10^{-6}/^\circ\text{C}$

14M

**UNIT-II**

3. For the two bar truss shown in figure, determine the displacement at node 1 and the stress in element 1-3. Take  $E=70$  GPa,  $A=200$  mm<sup>2</sup>.

14M

**OR**

4. For the loaded beam shown in figure, determine the slope and deflection at node 2 using finite element concept. Take  $EI=900 \text{ Nm}^2$ .

14M

**UNIT-III**

5. Calculate displacements and stress in a triangular plate, fixed along one edge and subjected to concentrated load at its free end. Assume  $E = 70,000 \text{ MPa}$ ,  $t=10\text{mm}$  and  $\nu = 0.3$ .

14M

OR

6. Determine stiffness matrix for given axi-symmetric element.  $E=200\text{GPa}$ ,  $\nu=0.25$ . Coordinates are in millimeters.

14M

**UNIT-IV**

7. a) Define i) Isoparametric element ii) Subparametric element iii) Super parametric element.

4M

- b) Evaluate following using Gaussian quadrature. Also compare with exact solutions.

i.  $\int_{-1}^1 (x^4 - 3x + 7) dx$

ii.  $\int_{-1}^1 e^{-x} dx$

iii.  $\int_{-1}^1 [x^2 + \cos(x/2)] dx$

iv.  $\int_{-1}^1 \frac{\cos x}{1-x^2} dx$

10M

OR

8. A composite wall consists of 3 materials. The outer surface temperature is  $20^{\circ}\text{C}$ . Convective heat transfer takes place on the inner surface of the wall with surrounding temperature  $T_{\alpha} = 800^{\circ}\text{C}$ , and  $h = 25 \text{ W/m}^2\text{K}$ . Determine the temperature distribution in the wall.

14M

**UNIT-V**

9. Evaluate Eigen vectors and Eigen values for the stepped bar shown in figure. Take  $E = 200 \text{ GPa}$  and specific weight  $7850 \text{ kg/m}^3$ . Draw mode shapes. Take  $A_1 = 300 \text{ mm}^2$  and  $A_2 = 150 \text{ mm}^2$ .

14M

**OR**

10. Evaluate the lowest Eigen value and the corresponding Eigen modes for the beam shown in figure.  $E = 200 \text{ GPa}$  and  $\rho = 7840 \text{ kg/m}^3$ ,  $I = 2000 \text{ mm}^4$ ,  $A = 240 \text{ mm}^2$ ,  $L = 300 \text{ mm}$ .

14M
